

OPALESCENCE

How does it work?

Your dentist will take impressions of your teeth that will allow for custom trays to be made for your bleaching procedure. The Opalescence gel is placed in thin, comfortable trays and fitted over your teeth. As you whiten your teeth, carbamide peroxide is broken down and oxygen enters the enamel and dentin. This bleaches out the discolored areas. The structure of the tooth is not changed. The color of the tooth is simply made lighter.

Is It Safe?

Whitening your teeth, under the supervision of your dentist, has been proven safe in clinical studies over a period of many years. The primary ingredient in Opalescence is carbamide peroxide, which has been safely used to brighten the smiles of millions of people worldwide.

When will I see results?

Results are often seen after one night. Optimum natural whiteness usually occurs when the process is continued for a week to 10 days. Your dentist will go over what you can expect for your individual situation.

How do I keep my smile white?

After you have the white smile you've long desired, it's important to keep it that way. Practice good oral hygiene and always remember to brush after consuming staining food or beverages. Opalescence Whitening toothpaste is a wonderful product for maintaining your bright smile. It not only whitens, it offers a higher fluoride uptake than any other toothpaste. It is available through your dentist or by calling 800.552.5512.

REV BLEACHING

15 minutes, once a day to your whitest smile

Perfecta REV! take-home whitening treatment is a revolutionary process that delivers optimal whitening in only 15 minutes, once a day.

This patented 14% hydrogen peroxide formula delivers proven whitening results with the shortest wear time of any professional whitening product. REV! gel is water based to hydrate the teeth as it whitens and to avoid thermal sensitivity naturally.

Within a few days you will notice whiter teeth using the convenient take-home whitening. You apply the whitening gel to your teeth using your custom whitening trays. The gentle oxygenating action of peroxide gel and finishing rinse of REV! safely removes stains from your teeth. A 15-minute, once-a-day treatment with REV! allows you to choose the most convenient time to wear your trays.

The refreshing mouth rinse is formulated for use immediately after REV! gel.

Specially buffered formula immediately accelerates the breakdown of the gel into its active components, providing an added boost to the final whitening effect.

Rinsing safely removes residual gel from teeth and any soft tissue.

Jessica W Morin, DMD
FAMILY DENTISTRY

Contains an advanced form of Vitamin C which promotes healthy teeth and gingiva.

Contains Pentasodium Triphosphate, a sequestering ingredient that helps to "lift and remove" enamel stain.

Alcohol-free, cool mint flavor which leaves the mouth clean and refreshed after every treatment.

REV! delivers the shortest wear time with less sensitivity.
